Author online submission is broken down into steps. Steps can be completed in any order but all compulsory information must be completed before a manuscript can be submitted.

In the first step, journal specific submission guidelines are presented and authors are encouraged to follow the guidelines carefully in order to avoid delays in processing manuscripts.

Submission guidelines

Read the guideline and check the box at the bottom of the page to confirm you will comply with these guidelines.

Submission of manuscripts
Manuscripts should only be submitted online, via these webpages. Authors are encouraged to provide the names, addresses, and e-mail of potential reviewers. Note the following points:

a. The manuscript should be prepared according to Uniform Requirements for Manuscripts submitted to Biomedical Journals (www.icmje.org). American spelling is preferred.

b. Authors submitting a paper do so on the understanding that it has not been published and is not being considered for publication elsewhere. The authors should provide a statement about previous submissions and reports that might be regarded as duplicate publication of the same or a similar paper. Copies of that study should be submitted with the paper.

c. Authors should provide a description of their individual contributions to the study.

d. Reports of randomized controlled trials should comply with the CONSORT statement (www.consort-statement.org).

e. The study protocol (e.g., the protocol approved by the ethics committee) and a completed CONSORT checklist and flowchart should be appended to the manuscript.
The submitting author must register all other authors in this section.

The email address of each author is added one by one and the program will first check to see if their account exists in the database. If an account is found, the submitting author will then be prompted to select the correct individual.

If no account is found, the submitting author will be prompted to add the contact details of the co-author.
Details of the added authors can also be corrected by clicking the pencil icon next to each author in the list.

When all the authors are added, the submitting author can check the box at the bottom of the screen and continue to the next section.
In the details section, the author adds the required details specified by the journal. These usually include, the manuscript title, type of manuscript, **category** and abstract. The required information can vary from journal to journal.

All compulsory fields must be completed and word limits adhered to before the manuscript can be submitted.
The author can select journal specific keywords or add custom keywords in the keyword section.

Keywords are used for identifying potential experts from within the journal’s database who may be qualified to review submitted manuscripts.
The documents section allows the author to upload manuscript texts, figures and tables. A wide range of document types are acceptable.

The authors may be asked to ‘hide’ some of the documents from the reviewers by clicking the links in the document list. For example, if the journal has a double-blind review policy, the authors may be asked to upload a separate title page with author affiliations and ‘hide’ it.

Hidden files are not merged into the PDF document file that is used for reviewing purposes.
Some journals ask the authors to suggest potential reviewers for their manuscript. This can be either a compulsory or optional task for the authors.

Similar to adding co-authors, the program will identify reviewers who are already in the reviewer database to ensure multiple accounts are not added.
The cover letter and accompanying information page \textit{(submission declaration)} allows the author to add an accompanying letter and any other journal-specific information that may be required by the journal.

We submit herewith our manuscript entitled, "Soil quality in Denmark: A new guideline of the Danish Organic Soil Sciences", for publication in......
In the final step, all submission information is checked and the author is alerted if information is missing.

The PDF review document can be downloaded by the author for reference and to ensure compliance with the guidelines before finally submitting.
Once the manuscript is submitted, the author is returned to the dashboard.

When the submission process starts, the author can access a report giving up-to-date details of the review progress.

After evaluation, decisions and recommendations about manuscripts are sent to the authors by email and reports are also made available from the dashboard.
Thank you
